1.5''

The image shows a deep-field astronomical observation. The central object is a bright, circular source with a color gradient, where the innermost part is red and yellow, transitioning through green to blue in the outer regions. This suggests a complex internal structure or emission. Surrounding this central source is a large, diffuse, and irregular blue halo. The background is a dark blue field filled with numerous small, distant stars and galaxies, some of which are also color-coded. In the bottom left corner, there is a white horizontal scale bar.
